

For Immediate Release

Human Circuit Wins the 2012 Medical & Healthcare PRO AV Spotlight Award

June 19, 2012, Gaithersburg, MD, Human Circuit announced today that it was awarded the 2012 ProAV Spotlight Award in the Medical/Healthcare category for their work on an innovative and revolutionary integration project for Baystate Medical, Hospital of the Future in Springfield, MA.

'Recognizing the Industry's Best Professional Audiovisual Installations', Sound & Video Contractor and InfoComm International partnered to recognize and present this award to Human Circuit during InfoComm 2012 in Las Vegas. The mention and details of this project and will be featured in the July 2012 issue of Sound & Video Contractor, as well as at svconline.com.

Human Circuit has completed over 21 Medical Simulation Centers for teaching hospitals but this is the first time they've been able to step out of the simulation environment and into the operating room. Human Circuit's engineering team worked closely with Drake Systems Group, Inc. on the Baystate project and their featured contribution was an HTML based control interface designed to run on any device with a web browser resulting in an innovative technology integration project for surgical suites that highlights a new workflow and control approach.

Mr. Hatcher, CTO for Human Circuit said, "We're proud to have won this award and the recognition for our innovative approach to the cost and technical limitations imposed by purpose built touch panels. In effect; smart phones, tablets and integrated all-in-one PCs now become the control service. Our new "untethered" workflow is an innovative and easy-to-use solution for system control, communication and video distribution in the Operating Room" and this industry award confirms overall appreciation for this application.
