

For Immediate Release

Human Circuit Chosen as Media Integrator for Ohio's Riverside Methodist Hospital *The CME+I - Advanced Training Center - Improves and Upgrades Existing Connectivity and Communication Capabilities.*

GAITHERSBURG, MD., May 15, 2012 -- Human Circuit announced their collaboration with The Center for Medical Education and Innovation™ (CME+I) at Riverside Methodist Hospital. Human Circuit is proud to have been chosen once again as the media integration firm assigned to bring the hospital's training programs further into the future and 'high-tech' arena by updating their existing systems.

This center is a state-of-the-art medical education facility that has incorporated the world's most advanced healthcare technologies available and is comprised of three areas: the Conference Learning Suite, the Virtual Care Unit™ and the Laboratory Skills Center. Every one of these areas facilitates the evaluation of new medical technologies, and encourages the adoption of new skills. And all represent a major transformation in medical education and increased patient safety.

Because physicians, medical professionals from Riverside CME+I and other OhioHealth hospital staff members are dedicated to maintaining the highest levels of medical competency through ongoing training and professional development, Human Circuit has designed a newer, more innovative system using the most advanced technologies available in the market today.

Bruce Kaufmann, President and CEO of Human Circuit said; "We're excited to be working with Riverside again. We've had a long standing relationship – one that we've had the privilege to sustain for over seven years. (In 2005 we designed their original system) We appreciate forward-thinking clients who recognize and value the ROI benefit of upgrading and updating their technology".

Jim Hatcher, CTO of Human Circuit stated; " Riverside's new system will include our methodology and design options for un-tethered, personal points of control (PPC) along with HD video teleconferencing capabilities that will update existing connectivity to the center's cath labs and future operating rooms and medical suites. With this upgrade to HD capabilities and other added highlights, they'll have top-notch technology that will allow for growth and their future plans for Phase II".

About Human Circuit

Human Circuit is a 46-year-old company of proven creative thinkers and engineers who are dedicated to providing vital media integration solutions to clients in need of advanced video, audio, data and control systems used in communications, training, broadcast, streaming, and video on demand and presentation applications. With a video and IT-centric engineering core, Human Circuit designs and architects intuitive solutions that are aligned with a company's business objectives, anticipated growth and end-user needs.

Our extensive portfolio includes work for federal and state government entities, broadcast and television production studios, command and control centers, training facilities, distance learning centers, corporations and professional organizations, institutions of higher learning, medical and healthcare facilities and entertainment and sports venues.
